About

Product designer with front-end development and project collaboration skills, capable of independently driving product design and implementation from concept to launch. Skilled at organizing processes and structures in complex business scenarios, using design to enhance product experience and optimize business efficiency.

Experiences

Insulator Bio

UI/UX & Product Designer **2022-2026**

Responsible for the design and implementation of the product from 0 to 1, participating in business analysis, solution design, and version iterations. Drive process integration and experience unification across multiple modules, and ensure the product progresses on schedule and is delivered reliably through cross-team collaboration.

Purvar

UI/UX Designer **2022**

Responsible for both UI/UX prototyping and front-end development, mainly focusing on the maintenance of legacy projects (based on JSP) and the implementation of new requirements from design to development (Figma → Vue.js).

Skills/Tools

Visual & Degisn

Figma, Illustrator, Photoshop, After Effects, Lottie, Blender, Spline

Development

HTML/CSS/Javascript, Swift UI, Git, Astro

Others

AI Tools & Workflows
Godot/Unity Engine(Interactive Prototype)
Linux Basics

Projects

Tabmac, Dining Platform 2025-2026

Impact: Boost collaboration and conversion path efficiency.

Help design business modules to unify processes and experiences.

Streamline cross-module workflows and set interaction standards to cut communication costs.

Optimize the core conversion path (Order → Checkout → Fulfillment) to improve efficiency and completion rates.

Speed up design solution delivery by 15% and raise collaboration efficiency by 20%.

Treeing, Travel Platform 2023-2025

Impact: Build a differentiated supply system through loyal customer relationships and invitation mechanisms.

Design an invite-only growth model to optimize user acquisition and conversion.

Develop user relationship chains and sharing paths to boost engagement and platform activity.

Implement multi-role settlement to enhance B-side flexibility and system compatibility. Optimize key conversion paths to increase user conversion by over 15%.

NEBUS, De-centralized IM 2022-2023

Impact: Enhance system adaptability and user accessibility.

Participate in the design and implementation of enterprise communication products based on the Matrix protocol.

Create interaction solutions for encrypted communication scenarios to lower user barriers.

Optimize multi-device communication structure and information hierarchy to improve system efficiency.

Support system iteration and expansion to boost product adaptability in enterprise settings.

Education

Wuhan Technology and Business College

Visual Communication Design - Bachelor's Degree **2018-2022**
